🎼 Music Store Sales Analysis

---

1. Project Overview

This project analyzes sales data from a digital music store. The dataset includes comprehensive information about:

- Tracks
- Albums and Artists
- Customers
- Invoices and Invoice Lines

The objective is to extract business insights that support strategic decisions related to:

- Marketing
- Sales growth
- Customer segmentation
- Content optimization

---

2. Objectives

- Identify top revenue-generating customers
- Determine the most popular music genres and artists
- Track performance by country and city
- Deliver KPIs and visual dashboards for decision-makers

---

3. Dashboard 1: Executive Overview

Target Audience: Executives and upper management
Purpose: High-level view of overall business performance

KPIs

Metric	Value
Total Customers	59
Total Revenue	$2,328.60

- Column Chart: **Sorting artists by ArtistsRank**

Recommended Slicer

- Media TypeId
- Genre (optionally combine with Artist)

---

6. Key Insights

- A small group of customers contribute to the majority of the revenue
- Rock, Latin, and Metal are the dominant music genres
- USA has the highest revenue among all countries
- Iron Maiden leads with 21 albums in the library
- Sales are distributed evenly across the cities.

---

7. Recommendations

Area	Recommendation
Content Strategy	Focus on expanding Rock, Latin, and Metal categories
Customer Targeting	Launch loyalty campaigns for high-spending customers
Market Expansion	Prioritize marketing in top-performing countries: USA, Canada, Brazil
Artist Promotion	Promote high-output artists (e.g., Iron Maiden)
Personalization	Customize recommendations based on city or user behavior
